abcdefghijklmnopqrstuvwxyz

*** is the perfect font for body text and headlines on a website. Its modern style, suited with past characteristics of great typefaces, make it highly readable in any context. The full-circle curves on many characters make *** a great font to blend seamlessly with other fonts while still maintaining its uniqueness.
Whether to be used for body text or headlines on a web page, *** is the right font for any project.

      <point x="206" y="283" type="line"/>
    </contour>
  </outline>
</glyph>
```
In case you didn't recognize it, this was the code of the "A.glif" file from the Open Baskerville font.
Let's not be afraid of it. If you read it, this code describes the drawing of a classical digital font: built as outlines. The points are coordinates for the contour of the letter.

Technically, the code of every typeface is public, as they can all be opened in font editing software and reveal the position of their points and curves. But unlike software, the interest and originality of a font usually still remains the same: its shape. Even though there is a growing interest in programmatic fonts, fonts today are hardly ever designed by writing code, they are instead drawn in visual interfaces, and in the end it is their visual form that is read and used. Rather than viewing these approaches separate from fonts, wouldn't it be nice to

```xml

Bagnard Sans

http://fonts.github.io/typographic-collaboration/

Connor Davenport, Ran Zheng and
Hitesh Singhal worked on a
responsive Reglo that changes
with the different screen sizes.
The alternate characters are
inspired by Joost Schmidt's
Bauhaus modular type.

SOURCE FILES REGLO ADDITIONS

RESPONSIVE REGLO

PUCKER

PREVIOUS   NEXT

http://fonts.github.io/typographic-collaboration/

Miles Holenstein, Trevor Carr and
Linxuan Lyu added brand new
glyphs to the Reglo font, and
experimented with a series of
scripts and interpolations.
